## **CLAIMS**

- 1 'In Fixing device for a movable wall with a fixing element which can be brought 2 into its working position by an actuating member that can be actuated manually, 3 characterized in that the actuating member is constructed as a turning knob (3) whose rotating 4 movement can be transformed into a longitudinal movement for the fixing element (5).
- 2. Fixing device according to claim 1, characterized in that the turning knob (3) is arranged in a recess (2) in the wall, which recess (2) surrounds the turning knob (3) with a slight play.
- 3. Fixing device according to one of the preceding claims, characterized in that the turning knob (3) is provided with knurling (4) on its circumferential surface.
- 4. Fixing device according to one of the preceding claims, characterized in that the turning knob (3) is provided on its side facing the wall with an axle stub (6) for rotatable support of the turning knob (3) and is provided with an eccentric pin (7) eccentric thereto.
  - 5. Fixing device according to one of the preceding claims, characterized in that the eccentric pin (7) engages in a slotted link (8) which is connected to the fixing element (5).

1

2

- 6. Fixing device according to one of the preceding claims, characterized in that the eccentric pin (7) is guided in a circular path (12) arranged in the wall, the ends of the circular path (12) serving as a stop for the rotating movement of the turning knob (3).
- 7. Fixing device according to one of the preceding claims, characterized in that the circular path (12) is constructed as a quarter circle.
- 8. Fixing device according to one of the preceding claims, characterized in that the fixing element (5) is constructed as a catch pin.
- 9. Fixing device according to one of the preceding claims, characterized in that the fixing element (5) is guided in a carrier (10) in its displacement direction, which carrier (10) is held at a rail (11) arranged in the wall such that it can be displaced and secured.
